

# Repair

## Computer Repair and Networking

### Services we offer (Over 20 years experience with PC's).

- PC compatible Computer Repair and Upgrades. Add Drives , USB, Serial & Parallel ports.
- Data Recovery even from non working computers and crashed hard drives.
- Networking & WiFi. We run CAT 5&6 wiring and repair network plugs and wall sockets.
- Virus / Spyware removal with data back up and OS recovery if needed.

Also:

We have many years of hardware and software engineering experience with an emphasis on embedded micro-controller development for data acquisition and motion control. We have developed products using IC technologies from Intel, Motorola, Zilog and Microchip. We can layout your next PCB and make prototypes.

# Web Site

## Design and Maintenance

### Check out a few examples of our work.

We can embed youtube.com videos on your site, create 360 degree virtual tours using panoramas, Flash animations and so much more.

### Technologies We Use

**AJAX**—Cutting edge web technology using JavaScript or Flash that allows your web site to behave more like a stand alone program. Faster, cleaner and more effective that a standard web site.

**Flash**— The best animation format on the web today. A vector based format that allows for complex animations on your web site without excluding low bandwidth (Dial up) visitors.

**MySql**—The best value database for web sites. Fast and reliable data management for anything from a calendar of events, to a full blown ecommerce site.

**PHP**—One of the great server side scripting languages of the web but has a C/C++ flair and is available on more servers than ASP.

**Zen cart**—One of the greatest open source (FREE) shopping cart systems available.
