

# Web Sites

## Check out a few examples of our work.

- [www.ccomps.com](http://www.ccomps.com)
- [www.mcwfb.com](http://www.mcwfb.com)
- [www.huntsvillear.org](http://www.huntsvillear.org)
- [www.lmontgomeryauktion.com](http://www.lmontgomeryauktion.com)
- [www.readcq.com](http://www.readcq.com)
- [www.ozarkmt.com](http://www.ozarkmt.com)
- [www.nwapra.com](http://www.nwapra.com)
- [www.mycatcad.com](http://www.mycatcad.com)
- [www.madisoncoffeehouse.com](http://www.madisoncoffeehouse.com)
- [www.ineedhorsetack.com](http://www.ineedhorsetack.com)

We can embed youtube.com videos on your site, create 360 degree virtual tours using panoramas, Flash animations and so much more.

## Technologies We Use

- AJAX**—Cutting edge web technology using JavaScript or Flash that allows your web site to behave more like a stand alone program. Faster, cleaner and more effective than a standard web site.
- Flash**— The best animation format on the web today. A vector based format that allows for complex animations on your web site without excluding low bandwidth (Dial up) visitors.
- MySQL**—The best value database for web sites. Fast and reliable data management for anything from a calendar of events, to a full blown ecommerce site.
- PHP**—One of the great server side scripting languages of the web but has a C/C++ flair and is available on more servers than ASP.
- Zen Cart**—One of the greatest open source (FREE) shopping cart systems available.

# Computer Repair

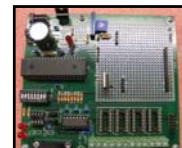

Over 20 years experience repairing PC's.

- **PC Compatible Computer Repair and Upgrades.** Add Drives , USB, Serial & Parallel ports.
- **Data Recovery** even from non working computers and crashed hard drives.
- **Networking & WiFi.** We run CAT 5&6 wiring and repair network plugs and wall sockets.
- **Virus / Spyware removal** with data back up and OS recovery if needed.

# Microcontrollers

Automate your process or machine

We have many years of hardware and software engineering experience developing embedded microcontroller systems for data acquisition, process automation, communications, and motion control.

- We can take your design from Idea to Production.
- We design using Intel, Microchip, Zilog, Motorola and many other processors.
- We develop firmware using Assembly Language, 'C' and Basic.
- We can layout your next PCB and make prototypes.

**Crossroads Computer Services**

From Bench to Browser **C.C.S.** for all of your tech needs
